To Whom It May Concern,

Recommendation for Miss LIU Ying Ge, Linda

I am delighted to recommend Ms Linda Yingge Liu, who worked under my direct supervision on digital transformation and AI-driven initiatives at CLP Power Hong Kong Limited. During her 52-week internship within the Project Execution Team, Linda focused extensively on integrating advanced data analytics, cloud applications, and artificial intelligence workflows into our project execution environment.

Linda made major contributions to the digitalization of several of our substation projects. She designed and delivered advanced Power BI dashboards and integrated Excel-based reporting systems to monitor construction progress, analyze key performance indicators, and track baseline-versus-actual project milestones. These systems significantly improved reporting transparency and operational visibility across the project team.

Linda also demonstrated impressive initiative in enterprise AI development. She created multiple Copilot AI agents supporting cost estimation, tender evaluation, document classification, and organizational knowledge management. In addition, she contributed to the development of a multi-agent Project Management Framework integrating AI-assisted workflows across engineering, commercial, quality assurance, and HSSE functions. Her work on Retrieval-Augmented Generation (RAG) systems and enterprise knowledge base architecture reflects a strong and current understanding of AI implementation and data engineering principles.

Further strengthening our project execution capabilities, Linda developed a comprehensive Project Lifecycle Hub using Power Apps, integrating project monitoring, risk tracking, contract management, AI functionality, and centralized reporting within a single operational platform now actively utilized by our team. She also explored Asset Information Management (AIM), and BIM-supported digital twin concepts, demonstrating her ability to engage with emerging technologies and apply them to real engineering environments.

What distinguishes Linda is her ability to bridge engineering expertise with digital transformation and AI implementation. She is highly analytical, self-driven, and intellectually curious. I strongly recommend her for any role involving AI development, digital transformation, engineering analytics, or workflow automation.

Yours sincerely,

Lee, Tsz Laam

Senior Manager - Project Execution
