To Whom It May Concern,

Re: Recommendation for Miss LIU Ying Ge, Linda

I am pleased to recommend Ms. Linda Yingge Liu for her outstanding performance during her internship with the Project Execution Team at CLP Power Hong Kong Limited.

During her time with us, Linda was embedded within our Project Management Office, where she gained hands-on exposure to the governance, tracking, and assurance frameworks underpinning large-scale infrastructure and energy projects. She provided valuable support to the Project Assurance function by reviewing compliance metrics within the Project Management Framework (PMF) and Project Management Governance System (PMGS). In addition, she contributed to the enhancement of project assurance documentation and developed a centralized project action register, enabling portfolio-level tracking and improved visibility across multiple business units.

Linda also demonstrated strong technical initiative by designing and implementing a Risk Register and Action Register system using Power Apps. She applied structured methodologies to risk identification, classification, prioritization, and mitigation planning, integrating automated tracking features and priority matrices to support more proactive and data-driven project management. This system has since been adopted for operational use within the team, reflecting its practical value and effectiveness.

A key highlight of Linda's internship was her research work in emerging energy and environmental technologies. She conducted in-depth studies on green hydrogen, flue gas treatment, and emissions control systems, including evaluations of green methanol production and its effectiveness in reducing NO_x and SO₂ emissions. Furthermore, she led a Hydrogen Energy Feasibility Study focusing on Hong Kong and the Greater Bay Area, producing a comprehensive business proposal. Her work encompassed hydrogen-to-e-methanol pathways, fuel cell technologies, infrastructure integration, market feasibility, and regulatory considerations. She also independently expanded her research to include related areas such as e-methanol production and carbon capture, utilization, and storage (CCUS).

Linda is a proactive and highly capable individual who consistently strives to bridge academic knowledge with real-world application. She has demonstrated strong organizational skills, disciplined execution, and a structured approach to project governance and infrastructure management. Her professionalism, analytical ability, and drive to deliver meaningful outcomes make her a valuable asset to any organization.

I strongly recommend Linda for future academic or professional opportunities and am confident that she will continue to excel in her endeavors.

Yours sincerely,
